RECYCLED GLASS FOR SAND BLASTING

ENVIRONMENTALLY FRIENDLY

NON-METALLIC

CHEMICALLY INERT

Crushed glass has been introduced to the blast cleaning industry as a replacement to silica sand. Crushed glass is processed from recycled collection glass and manufactured into abrasive media. While silica sand is a raw material used in the production of glass, the manufacturing process converts the crystalline structure to the amorphous state. Its physical properties, like hardness and low dust formation allow a fast and efficient sandblasting for automotive and industrial applications.

BENEFITS OF GLASS JET

SAFE

Less than 1% crystalline free silica.

ENVIRONMENTALY SAFE

Recycled glass helps saving natural resource, giving a second life to glass products. Heavy metal free

CLEAN

Leave a clean bright finish to metal surface (SP5), with limited amount of dust, less than with silica sand.

EFFICIENT

Enable fast and effective sandblasting. Because it is more aggressive, it is able to remove corrosion and tougher coatings that other medias.

DRY PRODUCT

Recycled glass does not absorb moisture.

PACKAGING

Available in 22,7kg (50 lb) plastic bag, 49 bags per pallet and also in 1 180 kg (2 600 lb) big bags.

Can be used with standard sandblasting equipment.

MAIN USES

10 - 20

TECHNICAL PROPERTIES

PHYSICAL PROPERTIES

CHEMICAL PROPERTIES

HARDNESS	6 Mohs	SiO ₂ *	74 %
SPECIFIC WEIGHT	2.6	Na ₂ O	15 %
BULK DENSITY	80 lb/pi ³ - 1 300kg/m ³	CaO	5 %
GRAIN SHAPE	Angular	MgO	4 %
ABSORBTION	No moisture	Al₂O₃	1%
COLOR	Green	Others	1%

Conditioned and distributed by

LE CHOIX DES ENTREPRENEURS | THE CONTRACTOR'S CHOICE

When used as a sandblast abrasive, the following safety precautions should be taken; use protective equipement abrasive resistant clothing, safety shoes, leather gloves, ear protection and approved helmet. Point the nozzle only at the area being cleaned. It is recommended that a pot screen be used at all time to keep foreign materials from entering the sandblast machine.
